DETAILED ACTION

1. Response to the office action dated Jan 24, 2007 have been entered and considered carefully.

Claims 90, 92-96, 99, 101-105 and 108-111 are pending.

2. The rejection of claims 90, 92-96, 99, 101-105, 108-111 under 35 USC 112 first paragraph is maintained for reason of record.

Applicants argued that the specification has provided operable description to the term “treating neurological disorder”. This is erroneous. On page 22, the particular description was that the compounds have activity to stimulate neuronal regeneration and growth in a mammal without any specific evidence showing treatment of etiology or symptom of any disease. While neuronal regeneration or growth is expected to enhance whatever function of the neuron at certain anatomical location, no description of any of such regeneration or growth being inexorably linked to any disease or symptom. Particularly on page 39, Table III, the compounds were tested using a MPTP neurodegenerative model to indicate “substantial neuronal regeneration after induction of MPTP-derived lesions” (see lines 28-29). The measurement is made on dissected striata being an indicator of compounds being active in neuronal regeneration/recovery after MPTP induced lesions. No correlation as to which neurological disorder, what symptom, at what dosage, at what site of administration can such treatment be operated. Applicants provided no nexus as to such data being able to be extrapolated to treatment of any and all neurological disorder such as in the claims.

3. The rejection of claims 90 and 99 under 35 USC 112 first paragraph is maintained for reason of record.

Applicants argued that “solvates” is a well-known term. Such argument does not provide enablement for any solvate existed or can be made and can be tested for activity in treating any and all neurological disorder. As a matter of fact, the term “solvate” although known to chemist, does not automatically enable one skilled in the art to prepare them. A state of the art reference is hereby provided for applicants’ convenience, it is clearly stated by chemists that

Art Unit: 1625

“one can say that if the formation of polymorphs is a nuisance for crystal engineers, *solvate formation* can be a nightmare...” (see Braga et al. p.3640). In the entire specification, not one solvate has been prepared nor was there any description of what kind of solvate can be prepared.

4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
